## Introduction

Various crypto issues such as bad economic models and investment schemes possibly cause loss to many people.

The meme tokens trends offer rewards from transaction taxes and deflationary schemes. It triggers many people to speculate about increasing value and financial freedom without an actual use case, but their profits depend on temporary trends.

Many scams, news, and hacks have caused many investors' losses in the past few decades. Not all people are good at speculating and understanding the truth. Most of them are influenced by the news from the media. Therefore, they cannot think rationally.

A bad economic model will only benefit minor people and cause disadvantages for most people.

The utility is something that is based on current needs and future needs.

As our commitment, we prioritize our community support above our ecosystem.

All the platforms we build in the future are based on the community's demands and needs.

Everyone can submit ideas, approve or reject them.

## RedMoon

RedMoon is a Defi Community-Driven that focuses on decentralized Web3 projects, and it is not limited to a single platform or use case.

RedMoon has an initial project called RedShard, a decentralized multi-platform Copy Trading as the initial process in creating an ecosystem.

New platforms will be launched on Moonrise when the submitted proposal has meet community agreement to realize it.

The native utility token of the RedMoon platform is RDM. This is used as the base currency in the RedMoon ecosystem.

RDM contains several functions :

- BalanceOf, provides account balance of the owner's account
- Transfer, executes transfers of a specified number of tokens to a specified address
- TransferFrom, executes transfers of a specified number of tokens from a specified address
- Approve, allow a spender to withdraw a set number of tokens from a specified account
- Allowance, returns a set number of tokens from a spender to the owner

As a future security consideration and a filter for traders, platform users, and community members, other protocols and contracts will be built outside token contracts, such as decentralized platforms, sharable rewards, etc.

## Use Cases: Utility

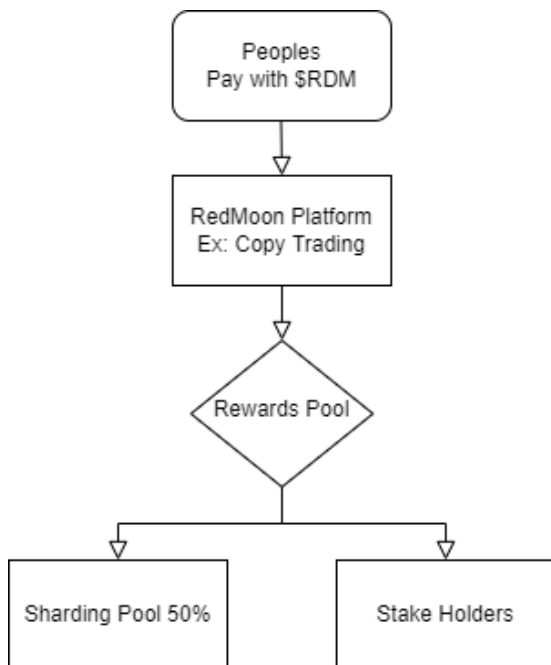

The RDM token is the only payment method for all platforms built on the RedMoon ecosystem.

All profits are distributed to community members via Rewards Pool, where "ShardingPool" has the largest share in profit sharing.

## Sharding Pool

Through the simple idea of a profit-sharing scheme, any future operational and development costs on the platform will no longer depend on token sales.

The following is a profit sharing scheme:

Is ShardingPool too big?

Maybe not, ecosystem sustainability is a top priority for long-term benefits.

ShardingPool has 50% allocated supply (350,000,000).

The wallet will remain locked until a new proposal for a fairer scheme arrives.

In the end, all profits will be fully distributed to the community. If the distribution is not balanced, we can increase or decrease the allocation.

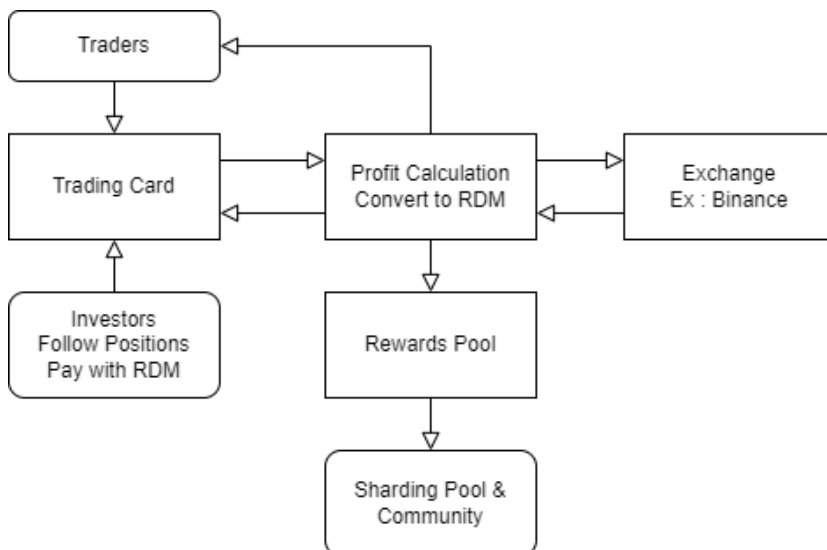

## Initial project : RedShard

RedShard is a Decentralized Multi-Platform Copy Trading, an external copy trading platform from various crypto exchanges like Binance, Poloniex, etc.

The users only need to provide an exchange API. Then, the users can take benefit by becoming a trader or investors.

The platform will run decentralized, and each user can propose the applied fees, vote for bad traders, or block them.

RDM tokens will be the only payment method, and any community member can apply or agree on the applied fees. Then any profits will be shared among all community members.

## Copy Trading

Users can create Trading Cards. Investors can follow open positions from the available Trading Cards. Traders can set up profit-sharing schemes either in a percentage or a fixed price.

## Bots

Users can create their robot and set it according to the specified conditions. Investors can follow the open position, and the robot owner can arrange a profit-sharing scheme with investors.

## Signals

Robots can open the positions based on signals as triggers, and users can create their signals or subscribe from trusted signal providers.

## Tokenomics

|                      | Distribution Terms                             | Token % |
|----------------------|--|---------|
| Private Sale         | Distribution 7 days after Initial DEX Offering | 3%      |
| Presale              | No Lock Up                                     | 12.8%   |
| Initial DEX Offering | No Lock Up                                     | 4.5%    |
| Reserve Funds        | No Lock Up                                     | 9%      |
| Strategic Partners   | Semi-annual distribution across 3 years        | 2.7%    |
| Foundation           | Semi-annual distribution across 5 years        | 10%     |
| Sharding Pool        | Locked staking                                 | 50%     |
| Team                 | Annual distribution across 5 years             | 7%      |
| Airdrop              | Distribution across events                     | 1%      |

## RedMoon Teams

It's fully doxxed

It is supported by a team that shares the vision to build RedMoon. A solid foundation is a top priority for long-term sustainability.

### **Prayd**

RedMoon Founder, Computer Science graduate and working as Software Engineer since 2014. is now focusing on blockchain as the future.

## WaveMap

Delta is the last wave and will be remapped into "delta events."

The following map provides short-term goals information for realizing a stable ecosystem.

### Gamma

- Release
- Private Sale
- Presale
- Initial DEX Offering
- Marketing

### Beta

- Marketing
- CMC, CG Listing
- Partnership
- Sharding Pool
- RedShard Release

### Alpha

- Frontend V2
- Security Audit
- RedShard Stable
- Moonrise
- CEX Listing

### Theta

- Marketing
- Frontend V2
- Partnership
- New Projects
- Delta Events

### Delta

Delta wave will gather ideas from the community to plan for the future. Then, the new maps and goals in the new stable wave will be announced once all phases are achieved.

In the end, WaveMap will demonstrate RedMoon's commitment to creating a better ecosystem and what the community expects.

Those all goals can only be realized with good cooperation from various parties.
